Learn React Fundamentals and Build a Project

Acquire a solid understanding of React and apply it by building a practical project

0% complete

01

Setup and Introduction

Get familiar with the ecosystem and tooling around React

0/2 ▲

☐

Install Node.js and npm

Download and install Node.js and its package manager npm to prepare the environment for React development

High15msetup

☐

Learn JSX Basics

Understand the syntax and functionality of JSX, a crucial part of writing React components

Medium1h🔍research

02

Core Concepts and Component Building

Dive into the core concepts and learn how to build functional React components

0/2 ▼

03

Advanced Topics and Project Development

Deepen understanding of React by exploring advanced topics and applying them in a real-world project

0/2 ▲

☐

Learn About React Hooks

Understand how to use React Hooks to manage state and side effects in functional components

Medium2h🔍research

☐

Build a Full-Stack Application

Apply all learned concepts by building a complete application, integrating front-end and back-end

High2d▶️execution

04

Review and Refine

Polish skills and review learned material to ensure a solid foundation in React

0/2 ▲

☐

Review Core Concepts

Go through the learned material again, focusing on any areas that were challenging

Medium1d🔍review

☐

Participate in Coding Challenges

Apply knowledge in coding challenges to improve coding skills and problem-solving strategies

Low4hpractice

AGENT TIPS

1. Start with building small projects to get hands-on experience

2. Join online communities like Reddit's r/learnprogramming and r/reactjs for support and resources

3. Use tools like CodeSandbox or StackBlitz for quick experimentation and learning
